TECH STATUS

- ✓ **TRL5**
- ✓ **Intellectual property**

Background and Technology

eVIHa is a software that was born in 1998 for the Clinical Monitoring of HIV infection and AIDS. Over time, this application has been improved to the point where it is currently used by all the doctors in the hospitals of the Balearic Islands with their patients with this disease and is used to monitor old cases, manage new cases and manage follow-up through appointments with patients.

Applications

The main application is to be the management tool for the health services of the Balearic Islands for the management of patients with HIV infection and AIDS.

Technology status

Intellectual property

Title: eVIHa, a database-clinical manager for monitoring and control of hiv-infected patients.
