

INTRODUCTION:

Within the frame of the “Call for proposals 2006” of the European Commission Public Health programme, the **Directorate-General for Health and Consumers of the Balearic Islands in Spain**, launched the FOOD PRO-FIT project to the “European Agency for Health and Consumers” EAHC (CHAFEA)

“ as part of the strategy for managing the causes of disease, actions aimed at the so-called health determinants, in the small and medium-sized enterprises (SMEs) interfaces in the food channel, ”

“Facilitate the reformulation of recipes and products for SMEs food manufacturers and the HORECA channel (Hotels, Restaurants and Catering) by means of a **new web2.0 tool.** ”

Spain - 07010 Palma de Mallorca

Subject: Call for proposals 2011 - Second Programme of Community action in the field of Health (2008-2013)

Ref.: Your proposal Ares no. 594370 - "3.2.1.1. Reducing health inequalities: preparation for action plans and structural funds

Proposal number: 594370

Acronym: ineq€HIA tool

Title: 3.2.1.1. Reducing health inequalities: preparation for action plans and structural funds projects

| Criteria Block A: Policy and contextual relevance | Note | Comments |
|--|------|---|
| (1) Project's contribution to the Second Health Programme and its annual work plan in terms of meeting the objectives and priorities | 7/8 | The proposed project is consistent with the Second Health Program and the annual work plan. The work covers the EU's concern with health inequalities. The proposal partly addresses a number of other annual work plan priorities. |
| Strategic relevance in terms of expected contributions to the existing knowledge and implication for health | 6/8 | The research promises to make a strong contribution to the EU Health Strategy. The proposal has wide geographical coverage and offers opportunities for transferring the findings to other Member States. The proposal has the potential to contribute to improvements in health of citizens of disadvantaged and unhealthy places in the EU. However, in order to do so, activities will need to be introduced to ensure uptake and use of the tool, as well as the development within the lifetime of the project of regional action plans. |
| (3) Added value at European level in the field of public health (2 aspects) | 5/8 | <p>The proposal offers opportunities for a long term and sustainable impact on EU policy making. The study is clearly pan-European, easily accessible for all countries, institutions and workplaces, replicable and, therefore, with significant potential multiplier effects.</p> <p>However, this potential would require to address the major weakness of the proposal as it is currently written: ensure uptake and use of the tool, by the development of a certain number of action plans, to test the tool in real life/ policy situations.</p> |
| (4) Pertinence of the geographical coverage | 7/8 | The project involves 9 partners from 7 EU countries. The 7 countries represent a diverse set of states from across Europe. This diversity is consistent with the aims of the study. |
| (5) Adequacy of the project with social, cultural and political context | 6/8 | A high level overview of the social, cultural and political context is provided. However, this discussion is generic and whilst successful in identifying the pertinent issues, is not specific on how this proposal will embrace the diversity of contexts in which the project will be completed. It might be considered questionable for countries in different political and economical situations – hence the need to invest in activities to involve the end users and testing of the tool to see how it |

| | | |
|---|--------|---|
| | 4/5 | advisory board and a steering committee. This approach promises to be fruitful in terms of keeping abreast of the most recent thinking. The proposal is a little light on detail in internal communication – overall decision making amongst multiple partners can be problematic. The external communication strategy is fairly strong although the detail of how messages will be targeted at key stakeholders could be clearer. |
| (5) Overall and detailed budget, Financial management | 7/10 | The overall budget request is significant but consistent with the ambitions of the project. The budget is spread appropriately across the various project partners.. |
| Total criteria block C: | 21/30 | |
| Overall appreciation - Total: | 72/100 | |
| Conclusion and suggestions | | <p>A well written, innovative proposal in that it aims to introduce a well proven and validated technical tool (HIA) in the policy making process. Very adequate in terms of the technical work that needs to be done to test and validate the tool, as well as to make it available in an innovative "no-frills" manner. The proposal suffers from one main weakness, that needs to be addressed – it should include in its scope the work necessary to ensure uptake and use of the tool by end users, as well as the development in the lifetime of the project of a certain number of action plans. This should have been reflected in several sections of the proposal, as per the comments under these specific parts.</p> <p>In view of the available budget the evaluation committee decided to not recommend for funding any proposal which falls under 73 points.</p> |
| Recommended for funding: | No | |
